

HECO Direkt high sensitivity floorstanding monitors

Inspired by traditional roots, the engineers at Heco have created a modern 2-way loudspeaker incorporating the latest technological innovations. The resulting HECO Direkt combines the dynamics and bass power of a large floor-standing loudspeaker with the realistic imaging and three-dimensional soundstage of a high-end stand-mount. All of the individual components have been specially developed for this loudspeaker and optimised for high efficiency and minimal distortion.

Optimised components ensure excellent performance

Impressive bass is just one quality of the 11 inch subwoofer with its Kraft paper diaphragm. Thanks to development utilising Klippel laser measurement technology, this driver delivers low distortion and great sonic precision right into the midrange.

To ensure low bass neutrality is maintained, two flow-optimised reflex ports on the underside provide adaptable acoustic coupling to the room.

At 2.35 Hz, the 28 mm silk-compound tweeter takes over. Its powerful double magnet and efficiency-enhancing aluminium wave-guide result in excellent dynamic integration, making it the ideal partner for the highly dynamic subwoofer.

The overall result is a finely balanced and precise soundscape. The fast, tuneful bass, clear and articulate midrange and the dynamically fine treble are accompanied by outstanding dynamic

capabilities. Efficiency, speed and tonal purity of this standard can only usually be achieved with horn loudspeakers - the HECO Direkt delivers these qualities without the size, cost and sonic drawbacks of horns.

Their high efficiency and easy impedance characteristics - linearised via the impedance control circuit - also make them the ideal partner for modestly-powered valve and transistor amplifiers (>10 <320 watts per channel).

Top technology and timeless design

The sloping enclosure of the HECO Direkt not only provides for visual elegance, it also offers tangible acoustic advantages. The wide, backward tilted baffle optimises phase integration of the drive units, while the treble unit's waveguide optimises dispersion characteristics – eliminating baffle and room interactions .

The three-point mounting of the cabinets on sleek, solid-metal feet ensures ideal weight distribution and great stability. Aesthetically, the influence of iconic guitars from rock history on the Direkt is unmistakable.

Specifications

Cabinet:

Stylish lacquer finish in Satin White or Satin Black with contrasting double stripes on the front

Solidly built, multiply braced and strutted MDF enclosure with attractive diffraction-reducing curves

Bespoke solid metal foot construction for an absolutely stable base, three-point mounting for perfect weight distribution

Floor-protecting rubber feet *and* all-metal spikes included to suit all floor types

Twin bass-reflex design with bi-directional airflow-optimized downwards-firing ports for optimal bass and good room integration

Dimensions (WxHxD):

440 x 998 x 397mm inc feet
25.8 kg

Power Handling (RMS/Max):

200 / 320 Watts

Sensitivity (2.8V/1m):

95 dB

Impedance:

4 – 8 Ohms

Frequency response:

25Hz – 28KHz

Recommended Amplifier Output:

10 – 320 Watts

Price:

£2,500 per pair
